Advisor for Ice Harbor Navigation Lock

A short delay in lockage may occur at Ice Harbor Lock & Dam located at SN River mile 9.7, October 8 through 15.

Materials for a boat barrier system are being delivered and the navigation lock is the safest area for unloading the barrier system supplies.

Commercial vessels are asked to radio the control room at Ice Harbor as soon as they enter Ice Harbor Cut going upstream and as soon as they have past Lower Monumental lock going downstream, to announce their expected arrival for lockage at Ice Harbor.

Every effort will be made to accommodate the expected lockage time, but certain circumstances may prevent the contractor from immediately vacating the lock. A short delay in lockage is possible.

As always, we appreciate your understanding and cooperation with this matter. For additional information, please call Operations Division, at (509) 527-7115 or 509) 527-7114.
